

Statistics Seminar

Conferences and Being Part of the Statistics Community

Layla Guyot

Friday, September 13

12:00 DERR 122

Abstract: Attending conferences gives you the opportunity to present your work and get feedback from people with similar or completely different research interests. You will meet the biggest names in your field, and learn about new tools, methodologies, and techniques. Conferences are a great way to make connections with other researchers and who knows, maybe future employers! In 2019, I have attended four conferences related to statistics and I will share what I have learned by presenting and attending talks. I will also share how we can encourage our students to be part of the statistics community.
